WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

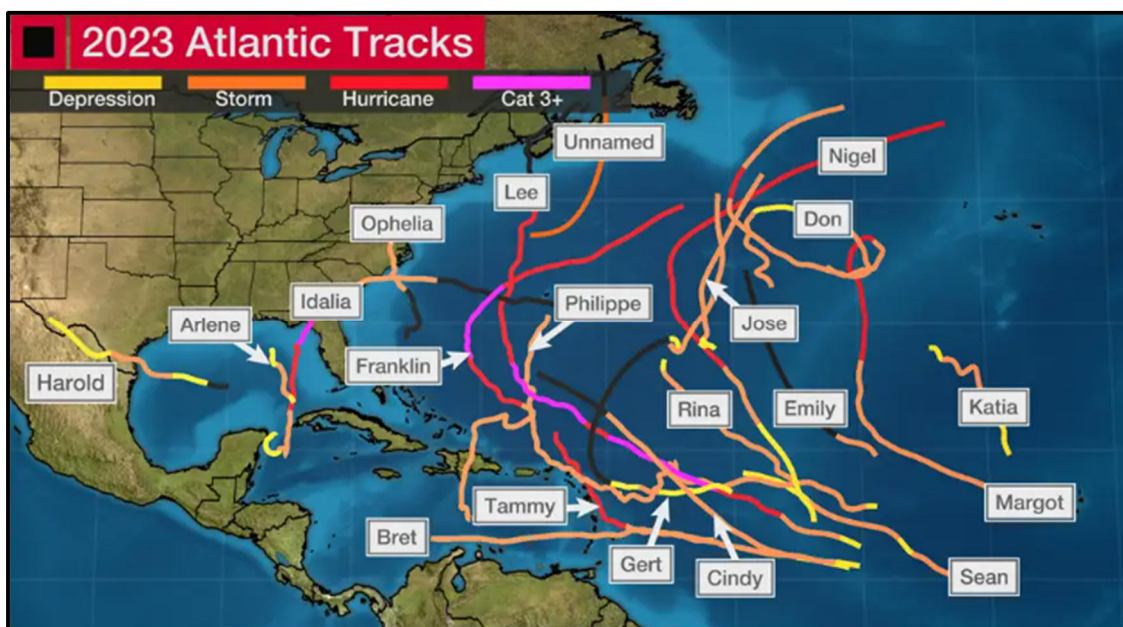

November 6, 2023

## Tropical Activity

- There are no tropical disturbances on the National Hurricane Center's tropical outlook map, and nothing is expected over the next seven days.
- The tropics are dominated by dry air and hostile upper wind for now.
- However, it's too soon to declare the hurricane season over. The waters of the southern and western Caribbean are still exceptionally warm, and a non-tropical system sitting over the still-warm open ocean could still randomly develop.
- The odds of a threat to the U.S. and surrounding areas are low but not yet zero.

## 2023 Atlantic Hurricane Season – October Recap

- The 2023 Atlantic hurricane season was much quieter in October, especially compared to the seven named storms and three hurricanes that formed in September. October only saw two named storms and one hurricane.
- Sept. 10 historically is the peak of the Atlantic hurricane season, with most storms developing between mid-August and mid-October. Activity in the Atlantic basin so far in 2023 has been about 30 percent above average, compared to the long-term mean between 1991 and 2020, according to the National Hurricane Center.
- "Tropical cyclone activity in the Atlantic basin was near normal in October with the formation of two named storms, with one of those becoming a hurricane (Tammy)," the National Weather Service said in its monthly Atlantic tropical weather summary. A tropical depression also formed, and Tropical Storms Philippe and Rina both completed their life cycle early in October.
