WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

April 1, 2026

## Severe Weather Outlook

### Plains

- More than 52 million people are under a severe weather threat across parts of the Plains, Midwest, Ohio Valley and the Mid-Atlantic on Wednesday, the first of several days of storms expected to last through the weekend — setting the stage for potential flash flooding.
- A cold front will move through and stall over the Plains on Wednesday, and severe storms are supposed to fire along a dryline — the boundary between dry air from the west and warm, moist air from the Gulf — forecast to set up over southern, central Kansas, western Oklahoma and the Red River Valley in North Texas.
- NOAA's Storm Prediction Center has issued a Level 3 out of 5 risk of severe thunderstorms for this corridor, with storms expected to trigger between 3 and 6 p.m. CT.
- According to the FOX Forecast Center, these storms are expected to produce large, egg-sized hail. Storms are expected to organize into a line later in the evening where the threat will shift to damaging wind gusts and potentially strong tornadoes (EF-2+).
- A broader Level 2 threat stretches from northern Missouri cutting southeast across the Southern Plains through San Angelo, Texas to the U.S.-Mexico border. Dallas is under a Level 1 threat.
- In addition to the severe weather hazards, the FOX Forecast Center noted that the significant moisture in the atmosphere due to warmer temperatures will drive days of potential flash flooding.
- The greatest risk of flash flooding will be across parts of eastern Kansas, western Missouri and northern Oklahoma on Wednesday.
