WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

October 16, 2025

Severe Weather Outlook The Plains

- A potentially dangerous severe weather threat is brewing for the Ozarks and Mississippi Valley this weekend.
- A cross-country storm could fire off thunderstorms capable of producing damaging wind gusts, large hail and tornadoes.
- Extreme weather threat kicks off Thursday as the storm pushes out of the West and Rockies, putting portions of Colorado, Nebraska and Kansas at risk of some strong to severe thunderstorms during the day.
- The risk on Thursday is relatively low with the main threats include hail and strong winds.
- As the storm picks up steam and pushes to the east, the severe weather threat will increase.
- On Friday, the FOX Forecast Center said scattered thunderstorms could develop from Oklahoma to Missouri, and those storms could become quite strong.
- More than 30 million people from Texas to Ohio will be at risk of severe weather on Saturday.
- By Saturday afternoon, the FOX Forecast Center said the atmosphere will be unstable, and wind shear will be strong enough for the development of some supercell thunderstorms capable of producing hail, damaging wind gusts and tornadoes.
- The threat is then expected to shift eastward into the lower and mid-Mississippi Valley on Saturday evening and night.

Pending Individual Assistance Declaration Request

State	Event	Date Submitted	Approved/Denied/ Pending	Number of Counties/Tribes
