WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

October 29, 2025

Tropical Activity

Atlantic – Hurricane Melissa (CAT 2)

- The devastating hurricane made landfall early Tuesday afternoon near New Hope, Jamaica, as a Category 5 with winds of 185 mph and a pressure of 892 millibars, a historic strike that will lead to months and years of recovery.
- This landfall will go down in the record books as one of the strongest anywhere in the Atlantic Basin.
- Hurricane Melissa made its second landfall before sunrise Wednesday morning in far southeastern Cuba. According to the National Hurricane Center, the Category 3 hurricane with maximum sustained winds of 120 mph came ashore near the town of Chivirico around 3:10 a.m. EDT.
- Melissa is now carving through southeastern Cuba with high winds, flooding rain and coastal storm surge. Guantanamo Bay reported wind gusts up to 75 mph earlier this morning.
- The National Hurricane Center is warning that heavy rain could fall in southern Hispaniola and Jamaica through Wednesday.
- After leaving Cuba, Hurricane Melissa will sweep quickly through the southeast Bahamas today, then make its closest pass to Bermuda late Thursday and Thursday night.

Severe Weather Outlook

Central U.S.

- An area of low pressure will bring rain out of the Pacific Northwest and into the heartland.
- In addition, a storm system that moved off the southeastern U.S. coast on Monday will linger, bringing heavy rain to the Carolinas, the southern Appalachians and parts of Virginia through Wednesday.
- A very widespread area across the central U.S., Southeast, mid-Atlantic and Northeast could see 1-2 inches of rain by the end of the week.
- A Coastal Flood Warning covers the Outer Banks through Wednesday, while a Coastal Flood Advisory covers other parts of the state and Virginia.
- Thursday's rain will be enhanced by moisture from Hurricane Melissa, which will be over 1,000 miles offshore. Parts of the Northeast will see 2-3 inches of rain.
