WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

November 6, 2025

Atmospheric River Pacific Northwest U.S.

- Two waves of rain, snow and wind will push inland from the Pacific and through Northwest and Northern California.
- Through early Thursday the remnant moisture continues to bring showers to much of the Northwest, but winds are coming down.
- Winds could gust to 45 mph or more from Northern California.
- A slight break will come between the two events, but lighter rain will remain possible in western portions of Washington and Oregon.
- Thursday night into Friday, a less strong storm system with another atmospheric river will arrive late Thursday afternoon for Washington, Oregon, Idaho and western Montana.
- This will bring gusty winds, rainfall well into higher elevations and highest-elevation snow in the northern Cascades and far northern Rockies.
- Heavy rain, mountain snow and potential mudslides will be a threat, especially in burn scar areas.
- From northern California to northern Washington, widespread rainfall totals will range from 3 to 7 inches.
- There will be a threat of flash flooding, as relentless rain pushes in. The flooding potential will increase as the week pushes on, as new rain falls on already saturated ground.
- The Snoqualmie River in Washington is already running high because of an atmospheric river that impacted the region over the weekend.
