WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

March 15, 2024

## Severe Weather Activity

- A day after the Ohio Valley was left reeling from a devastating severe weather outbreak, another round of strong storms is making headlines on Friday.
- That system that brought the severe weather Thursday will drop into the Southeast and Southern Plains on Friday.
- The FOX Forecast Center said substantial atmospheric energy will build through the day in Texas setting the stage for the development of powerful thunderstorms across the Hill Country during the afternoon.
- NOAA's Storm Prediction Center just upgraded parts of South Texas, including San Antonio, into a Level 3 out of 5 severe weather risk.
- Storms will initially be discrete supercells capable of producing hail potentially baseball-size or larger. A tornado or two may be possible should individual storms persist east of I-35, along with damaging wind gusts of 60 mph or more.
- Over 300 reports of severe weather were recorded Thursday, including eight tornadoes in Ohio, Indiana and Texas. Additionally, over 200 reports of hail, with the largest hail measuring 4.5 inches in Oklahoma, and more than 100 reports of damaging wind gusts were reported, the FOX Forecast Center said.
- More than 90 Tornado Warnings and 350 Severe Thunderstorm Warnings were issued Thursday.
- Five of the eight tornadoes reported Thursday were in Ohio. It was the second-most active day of severe weather so far this year. Two people died when a tornado tore through Logan County.
- Another tornado tore through the town of Winchester, Indiana, leaving 38 injured, but so far no deaths, according to Randolph County Emergency Management.
- The governor of Indiana surveyed the tornado damage and said 50% of the structures in the town of Selma were damaged.
