WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

May 6, 2026

Severe Weather Threat Southern U.S.

- Another round of severe storms is taking shape Wednesday, with threats shifting into the Southeast.
- Numerous storms are set to slam the area, with the primary risk developing later in the day.
- Tornadoes and hail are possible, with damaging winds possibly continuing into the evening.
- Parts of Mississippi and Alabama are under a severe threat, where strong tornadoes could develop late.
- Storms are possible early in the day across Tennessee and into northern Mississippi, Alabama and Georgia, possibly elevated due to an east-west outflow boundary.
- The primary severe risk will develop during the late afternoon after 5 p.m. ET and into the early evening, as atmospheric energy builds.
- The severe risk may persist into the evening in Georgia as the southwesterly low-level jet brings instability into that area.
- Corridors of damaging winds may evolve as well.
- Georgia, Alabama, and Florida all recorded zero tornado warnings in April — an astonishing feat last seen in 2012. Wednesday’s threat marks the first tornado risk for Georgia and Alabama since March 15.
- This setup is expected to bring several days of rain too, with the heaviest downpours expected Wednesday in the South due to the slow movement of the front.
- For a large portion of the Southeast the rain will continue beyond Wednesday, where rain totals will generally mount up to 2 to 3 inches over a wide area.

Joint Preliminary Damage Assessments

| State | Event | Number of Counties for IA | | Start-End |
|-------|---|---------------------------|-----------|------------|
| | | Requested | Completed | |
| GA | Highway 82 Fire Apr 22-TBD | 1 | 0 | TBD |
| WI | Severe Storms / Tornadoes / Flooding Apr 13-23 | 22 | 0 | 4/30 - TBD |
