WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

December 2, 2025

2025 Atlantic Hurricane Season Recap

- The Atlantic hurricane season concluded on Sunday, Nov. 30, and was the first in a decade without a single hurricane landfall in the United States.
- "The U.S. benefited from a combination of unique atmospheric conditions, the timing of cold fronts pushing across the East Coast and a lot of luck to make it through the peak of the season without a single hurricane landfall," AccuWeather Chief Meteorologist Jonathan Porter said.
- "This reprieve is welcome after recent catastrophic hurricane strikes like Helene and Milton last year," Porter added. "The U.S. has endured 17 hurricane landfalls in the past five years. Many families and businesses are still struggling to recover."
- Tropical Storm Chantal was the only named storm to make landfall in the U.S., moving ashore near Litchfield Beach, South Carolina, on July 6 with maximum sustained winds of 60 mph. Six deaths were blamed on Chantal, which caused major flooding in parts of South Carolina and North Carolina.
- AccuWeather experts estimate the total damage and economic loss from tropical storms and hurricanes in the Atlantic basin this year is \$55 billion to \$61 billion, which is roughly one-eighth of last year's catastrophic total. For comparison, six storms during the 2024 Atlantic hurricane season caused a combined total damage and economic loss of \$457 billion to \$506 billion in the U.S., according to AccuWeather experts.
- If no additional storms develop before the end of the year, 2025 will end with 13 tropical storms and five hurricanes, close to the historical average for the Atlantic basin of 14 storms and seven hurricanes.
- Of the five hurricanes, three intensified into Category 5 storms — Erin, Humberto and Melissa — one shy of the record four set during the blockbuster 2005 hurricane season.
