WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

January 8, 2026

Severe Storm Threat Southern U.S.

- The first of two back-to-back cross-country storms is moving out of the Four Corners region and pushing east Thursday.
- These systems are set to deliver heavy rain to millions across most of the country east of the Mississippi River, as well as a severe weather threat to parts of the central U.S. and Deep South.
- This first system will sprint through the Midwest through the day and a widespread area of rain will cover Chicagoland in Illinois, Wisconsin and Indiana and reach into parts of the Ohio Valley into the evening.
- As this first storm lifts into the Midwest on Thursday afternoon, a round of thunderstorms will be possible across the Mississippi River Valley from St. Louis to Oklahoma City and as far south as Monroe, Louisiana.
- Damaging wind gusts are the main threat, but brief tornadoes could form if storms are able to cluster together in a fast-moving line.
- A cold front associated with the first storm will move into the Deep South on Friday, sparking the potential for the most significant severe weather threat this week.
- NOAA's Storm Prediction Center has issued a Level 2 out of 5 risk of severe thunderstorms for an area covering more than 8 million people across the Lower Mississippi and Tennessee valleys.
- On Friday, the second cross-country will develop once again in the Four Corners and move out of the southern Rockies.
- NOAA's Weather Prediction Center has issued a Level 2 out of 4 threat of flash flooding for Middle Tennessee, Mississippi and northern Alabama through Saturday, where more than 2-3 inches of rain is expected with localized pockets of up to 5 inches possible.

Joint Preliminary Damage Assessments

| State | Event | Number of Counties for IA | | Start-End |
|-------|---------------------------------------|---------------------------|-----------|-------------|
| | | Requested | Completed | |
| WA | Severe Storms Dec 5 and continuing | 12 | 0 | 12/15 - TBD |
