WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

November 16, 2023

Tropical Activity

Atlantic – Disturbance 1

- Located in the west-central Caribbean Sea.
- A tropical depression could form over the next day or two.
- Formation chance through 48 hours: Medium (60%); 7 days: Medium (60%)

Atlantic – Disturbance 2

- Located off the Southeast coast, between South Florida and the northwestern Bahamas.
- It is forecast to bring gusty winds and heavy rain to portions of the Atlantic coast of Florida and the Bahamas during the next day or so.
- Formation chance through 48 hours: Low (10%); 7 days: Low (10%)

Severe Weather & Flood Activity Florida

- Torrential rains and gusty winds slammed much of Florida Wednesday, mimicking tropical storm-like conditions and leading to flash flooding and thousands of power outages.
- Computer forecast models showed some areas potentially receiving more than a foot of rain by Friday, which could add to the already record-breaking rainfall levels experienced in the state this year.
- NOAA's Weather Prediction Center has upgraded the region's excessive rainfall risk to a Level 2 out of 4 in Central and South Florida, as rain rates could reach greater than an inch an hour.
- 11 million people in South Florida face flash flood dangers.
- Poweroutage.us reported at least 20,000 customers were without electricity on Wednesday evening as the combination of wind gusts of 40-50 mph and heavy rainfall helped bring down some tree branches and utility lines.
- Miami-Dade and Broward counties were both put under a Flash Flood Warning through the morning hours.
- A Flood Watch has been issued for parts of Central South Florida through Thursday.
- Overall, rainfall totals will likely reach 5-8 inches across much of the Miami and Fort Lauderdale area by Thursday, with isolated areas receiving as much as 10-12 inches.
