January 4, 2023

Severe Weather & Flooding Activity California

- Northern California is preparing for another strong weather system to arrive on Wednesday that is expected to bring dangerous winds that down more trees and knock out power.
- Areas at greatest risk for upwards of 4 inches of rain from the new storm include coastal areas of California, just north of San Francisco, as well as areas just south of San Francisco to the mountains just north of Los Angeles, AccuWeather meteorologists say.
- Another pocket where 4 or more inches of rain is likely to pour down is the west-facing lower slopes of the Sierra Nevada just east of Sacramento to just east of Redding, California.
- The latest severe weather arrives as the region continues to deal with the aftermath of the New Year's Eve storm that brought heavy rain and strong winds.
- The weekend storm caused widespread flooding across Northern California, knocked out power for thousands and stranded dozens on flooded roadways.
- Residents of Point Pleasant, Glanville Tract and Franklin Pond were ordered to evacuate due to flooding on Sunday. Evacuation orders remain in place.
- In Sacramento, more than 1,000 remained without power on Tuesday night.
- The utility warned that this next storm is expected to "be worse" with "multiple hours of high winds and gusts exceeding 50mph."
- The weekend storm also caused the Cosumnes River to reach its highest level in history and brought flooding to Wilton and parts of south Sacramento County. The county later confirmed Sunday that there had been a double levee breach.
- County officials have issued a local state of emergency and said they will be collecting damage estimates.

Pending Individual Assistance Declaration Request

State	Event	Date Submitted	Approved/Denied /Pending	Number of Counties/Tribes
CA	Heat Dome and Wildfires Aug 29 & continuing	10/26/2022	Pending	6 Counties
