WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

March 12, 2026

## Snow Forecast North & Midwest

- Back-to-back storm systems are set to dump heavy snow on millions of people across the Northern Tier of the U.S. beginning Thursday.
- More than 2 feet of snow could fall across parts of Wisconsin and Michigan through Monday, with more than a foot possible for other parts of the Upper Midwest as well as the Northern Plains and New England.
- The first storm will begin during the day on Thursday, as an extension of the atmospheric river that is currently impacting the Pacific Northwest.
- According to FOX Forecast Center, an area of low pressure is forecast to rapidly form in Montana and the Dakotas, then move east.
- High wind alerts are in place across the region, with wind gusts up to 75 mph possible. These winds could create power outages as well as periods of whiteout driving, impacting travel.
- Snow will begin in the Dakotas early Thursday, which will lift the warm front and strengthen the system.
- Blizzard warnings have been issued for the lakeshore regions of Lake Superior in Minnesota.
- As the first storm ends, a second storm is expected to form, impacting millions from Saturday into early Monday.
- On Friday afternoon, heavy rain and mountain snow will move out of the Pacific Northwest as a dip in the jet stream pushes east across the Northern Rockies.
- As the low moves east into the Great Lakes, heavy snow is likely to break out across the Upper Midwest and northern Great Lakes.
- Northern portions of New York and New England could see some snow as well, starting late Sunday into early morning.
- A blast of arctic air will move in after the second storm, impacting the Upper Midwest all the way down into the Tennessee Valley.
