WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

August 14, 2025

Tropical Activity

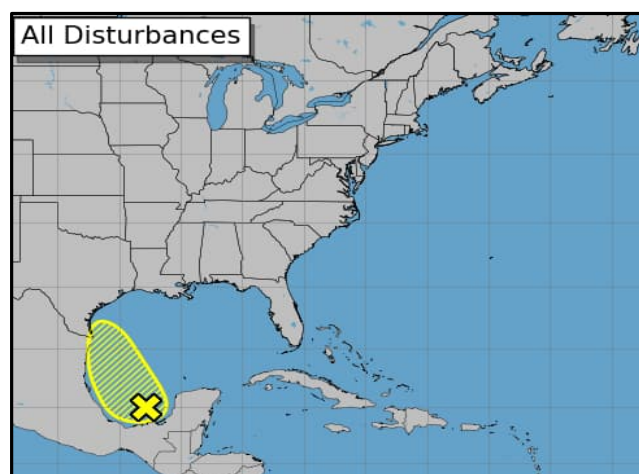

Atlantic - Tropical Storm Erin

- Tropical Storm Erin is now starting to become better organized and could rapidly intensify.
- At this point it doesn't appear as though the Leeward Islands, the Virgin Islands or Puerto Rico will take a direct hit from soon-to-be Hurricane Erin.
- Winds within Tropical Storm Erin have reached 50 mph with some higher gusts, and gradual strengthening is forecast over the next day or so.
- Erin is expected to become a hurricane by Friday and is forecast to become a major hurricane (Category 3 or higher) over the weekend.
- Located more than 900 miles to the east of the northern Leeward Islands and is moving off to the west at 17 mph.
- "Locally heavy rainfall, high surf and rip currents, and tropical-storm-force winds could occur over portions of the northern Leeward Islands, the Virgin Islands and Puerto Rico into this weekend as the core of Erin passes north of those islands," the NHC said.

Atlantic – Disturbance 1

- Area of low pressure located over the Bay of Campeche is producing disorganized showers and thunderstorms.
- Forecasted to move west northwestward across the southwestern Gulf during the next day or two, where environmental conditions are marginally conducive for further development.
- Expected to move inland over northeastern Mexico or southern Texas by late Friday.
- Locally heavy rainfall is possible along portions of northeastern Mexico and southern Texas over the next few days.
- Formation chance through 48 hours: Low (20%)
- Formation chance through 7 days: Low (20%)
