WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

September 18, 2025

Tropical Activity

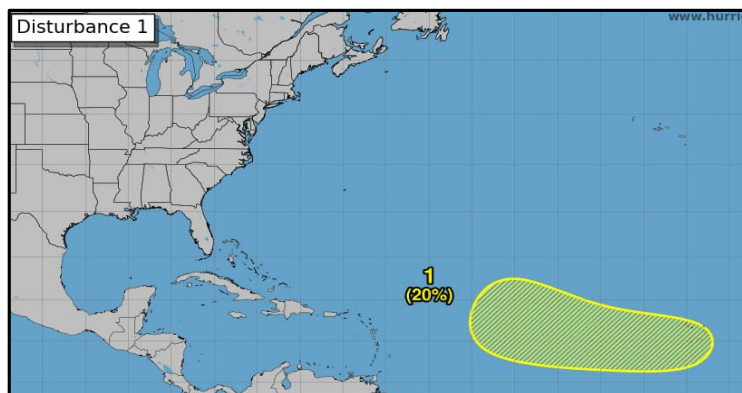

Atlantic – Tropical Storm Gabrielle

- Tropical Storm Gabrielle became the seventh named storm of the 2025 Atlantic hurricane season late Wednesday morning after first being designated as a tropical depression earlier in the morning.
- It's located between the Lesser Antilles and Africa, about 800 miles east of the northern Leeward Islands.
- Gabrielle is currently battling with a hostile environment of strong wind shear and dry air, two factors that have limited tropical development in the basin over the past three weeks, despite being in the typical peak of hurricane season.
- The National Hurricane Center says it could find a better environment for strengthening beginning Sunday and could then become the second hurricane of the Atlantic season.
- Fortunately, Gabrielle is not expected to be a mainland U.S. threat.

Atlantic – Disturbance 1

- The National Hurricane Center is also keeping an eye on another tropical wave about to move off Africa Friday.
- The chance of development of this next tropical wave is low for the next seven days. It may have to face the same hostile conditions that Gabrielle is facing.
- Moving west northwestward across the eastern and central tropical Atlantic.
- Formation chance – 48-hour: Low (0%); 7-day: Low (20%)
