WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

October 19, 2023

## Tropical Activity

### Atlantic – Tropical Storm Tammy

- Tropical Storm Tammy is about 480 miles east-southeast of Guadeloupe. The cyclone is moving west and a gradual turn to the west-northwest is expected to happen over the next day.
- Maximum sustained winds were around 60 mph with higher gusts, and the National Hurricane Center (NHC) says Tammy will gradually strengthen as it approaches the Leeward Islands.
- However, Tropical Storm Tammy is expected to remain below hurricane status while impacting the Lesser Antilles.
- Due to its proximity to the islands of the Caribbean Sea, Tropical Storm Watches have been issued and additional watches and warnings will likely be needed later on Thursday.
- A Tropical Storm Watch is in effect for Barbados, Dominica, Martinique, Guadeloupe, Antigua, Barbuda, Montserrat, St. Kitts, and Nevis.
- The watches do not include Puerto Rico, where squally weather is expected instead this weekend.
- The NHC says Tammy is expected to move to the west-northwest by Thursday night, followed by a turn to the northwest on Friday night or Saturday.
- On that track, the center of Tropical Storm Tammy will move near or over the Leeward Islands on Friday and Saturday.
- The U.S. Virgin Islands are included in the forecast cone as the cyclone starts to veer more northerly over the weekend.
- Rainfall totals of 1-2 inches with higher amounts of up to 4 inches are expected in the British and U.S. Virgin Islands into eastern Puerto Rico. Those rains may produce flash and urban flooding, along with isolated mudslides in the higher terrain.
- After passing the northern Caribbean islands, Tammy could enter a period of strengthening and become the season's seventh hurricane. The storm is expected to be pulled northward by a frontal boundary but stay well clear of the Lower 48.

## Joint Preliminary Damage Assessments

State	Event	Number of Counties for IA		Start-End
		Requested	Completed	
MA	Flooding Sep 11-13	2	0	10/10-TBD
