WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

March 16, 2026

Severe Weather Outlook Eastern U.S.

- A sprawling line of severe thunderstorms that slammed the Heartland Sunday is charging east Monday, placing more than 12 million people across parts of the Mid-Atlantic and the Southeast under a rare Level 4 out of 5 risk of severe weather.
- Widespread wind gusts approaching hurricane-force are possible and storms will be capable of producing strong, long-track EF-2+ tornadoes across parts of the Carolinas, north through Virginia, Maryland and Washington, D.C.
- The broader severe weather threat covers more than 96 million people from New York to Florida.
- Tornado Watches and Tornado Warnings were in place for parts of Georgia and the Florida panhandle early Monday.
- Severe storms will be most active across the Southeast through Monday morning, where supercell thunderstorms could produce large hail and tornadoes.
- Main threat shifts to the Carolinas and Mid-Atlantic by late morning and into the afternoon and is expected to peak late into the day.
- NOAA's Storm Prediction Center has issued a 15 percent risk of tornadoes covering a corridor from Washington, D.C. south through parts of central and eastern Virginia, as well as central North Carolina, including Raleigh, and north-central South Carolina.
- These tornadoes could be EF-2 or stronger and have the potential to be long-track tornadoes, the Storm Prediction Center said.
- Storms are expected to produce damaging wind gusts between 60-80 mph, which can easily damage structures and cause widespread power outages.
- The threat is expected to wane through Monday evening, as severe storms slide off the coast.
