WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

December 9, 2025

## Winter Weather Outlook

- Multiple fast-moving storms will take shape through this week, promoting rounds of accumulating snow, AccuWeather meteorologists say.
- These fast-moving storms, also known as Alberta clippers, will race southeastward out of central Canada into the Great Plains, Midwest and portions of the Northeast, spreading snow across the area.
- The first clipper will make its way out of southwestern Canada and into the far northern parts of the Plains on Tuesday before reaching the Great Lakes by Tuesday night.
- By Wednesday, the storm will be racing eastward, spreading rain and snow across much of the Northeast.
- All snow is expected from Michigan to southeastern Ontario, southern Quebec and into northern New England.
- "Within the stripe of snow on the northern side of the storm, a large swath of snow totaling 3-6 inches is expected from northern North Dakota through far northern New York and Vermont," said AccuWeather Meteorologist Peyton Simmers.
- Swaths of 6-12 inches are expected across portions of Wisconsin, Michigan and southern Ontario.
- Gusty winds will accompany the storm, raising the risk for blowing snow and power outages.
