WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

August 26, 2025

Preliminary Damage Assessments

Illinois

- The Cook County Department of Emergency Management and Regional Security (EMRS) is reviewing damage from the severe storms and flash flooding event that occurred between Aug. 16 and Aug. 19, 2025.
- Heavy rain, widespread tree damage, and flooding were the key impacts of the severe storms that swept through Kane County, toppling trees, knocking out power, blocking roads and damaging buildings.
- Hot and humid conditions developed on August 16 across northern Illinois, with heat indices between 100 and 105°F.
- This unstable air fueled nearly 17 continuous hours of thunderstorms from the afternoon of August 16 into the morning of August 17.
- On August 18, Kane County was placed under a tornado warning for a time impacting the northern portion of the county.
- The first round of storms on the afternoon of the 16th produced large hail and damaging winds, with the most severe impacts near Belvidere, Cary, Sugar Grove, Palatine, and Romeoville, where gusts likely exceeded 70 mph.
- Early morning hours of August 17, another round of storms brought torrential rain, flash flooding, and additional wind damage across western and southwestern parts of the Chicago metro area.
- Rainfall totals over the 24-hour period from August 16–17 included 5.66 inches in Sugar Grove and 4.94 inches in Montgomery.
- The Kane County Office of Emergency Management began collecting reports of significant uninsured structural damage to determine if the county qualified for a disaster declaration.
