WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

February 18, 2026

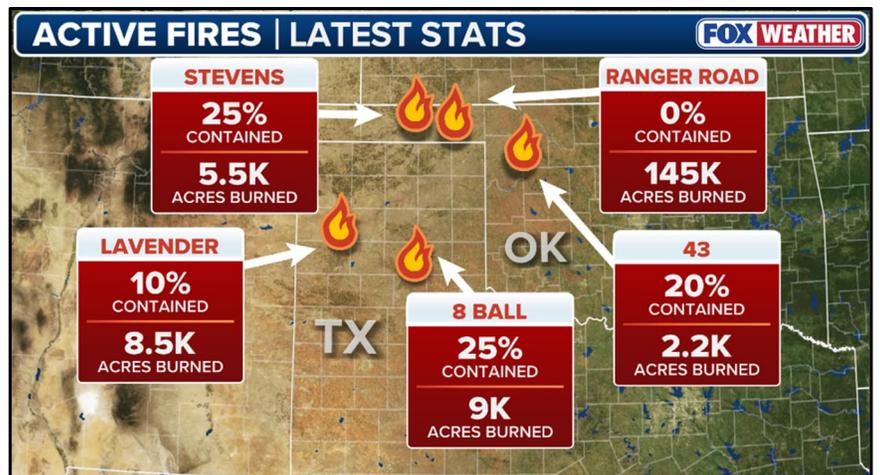

Severe Weather Threat Midwest

- The Midwest is in the middle of an active week of weather that will continue as the weekend approaches.
- The growing threat of strong severe weather threatens millions in the Midwest as the combination of high wind shear and low instability will provide the necessary ingredients for severe thunderstorms that could produce tornadoes.
- A severe storm threat is in place across parts of Kentucky, Indiana, Ohio and Illinois, and includes a slew of major cities, including Cincinnati, Louisville and Indianapolis.
- According to the FOX Forecast Center, discreet supercells will be a concern in the afternoon hours and set the stage for the potential development of tornadoes.
- As the evening progresses, these storms will likely cluster into a line, shifting the primary threat toward damaging wind gusts.
- By Friday, the primary system is expected to lose its punch as it crosses the Great Lakes.

Wildfires Oklahoma

- A new wildfire has broken out in the vicinity of Woodward, Oklahoma, and is spreading rapidly, prompting officials to issue mandatory evacuation orders for parts of the city.
- Multiple fires have erupted in Oklahoma, Kansas, Nebraska, Colorado and Texas as the region endures warm temperatures and wind gusts of over 70 mph combined with a very dry landscape.
- These weather conditions are being caused by the breakdown of a strong upper-level ridge, which is allowing a series of disturbances to move across the region.
