WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

April 12, 2023

Severe Weather Outlook Florida & Gulf Coast

- Tropical rainfall is in the offing for most of Florida and the Gulf Coast this week as a new weather pattern begins to unfold over the southeastern United States.
- "A strong area of high pressure holding in the mid-Atlantic for the first half of the week will create an east-to-west wind flow across Florida and into the Gulf Coast," said AccuWeather Senior Meteorologist Tyler Roys.
- Coastal flooding is also a concern into Wednesday morning for communities along the central coast, from Stuart to Daytona Beach, Florida.
- The onshore winds in these areas could lead to flooding issues, especially at times of high tide into midweek.
- As the week progresses, the area of high pressure will shift eastward to the coast of the Carolinas. As a result, it will alter the wind direction across the Gulf Coast and move the storm over Florida into the northern part of the Gulf of Mexico. This shift will also direct much of the moisture to the central Gulf Coast.
- On Thursday, drenching thunderstorms are expected to shift back into parts of Alabama, Florida and Georgia, bringing much-needed rain to many areas.
- A number of the storms may evolve from heavy and gusty to locally severe with the potential for damaging wind gusts and a few tornadoes and/or waterspouts, especially during the afternoon and evening hours on Thursday.

Joint Preliminary Damage Assessments

State	Event	Number of Counties for IA		Start-End
		Requested	Completed	
GA	Severe Storms Mar 24-25	2	0	4/4-TBD
AL	Severe Storms Mar 24-25	5	0	TBD
