WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

July 16, 2025

Tropical Activity

Gulf Coast – Invest 93L

- A slow-developing weather system is threatening to bring heavy rain and flooding to portions of the Gulf Coast over the next few days, regardless of whether it officially becomes a tropical storm or depression
- The system, which is now a broad area of low pressure, continues to move westward across the Florida Panhandle between Tallahassee and Panama City and is producing disorganized showers and thunderstorm activity mainly south of its center.
- Hurricane center forecasters said the system, designated as Invest 93L, is forecast to continue moving westward and could emerge or redevelop over the far northeastern to north-central portion of the Gulf, reaching the coast of Louisiana by Thursday.
- The National Weather Service in New Orleans warned that the system will bring locally heavy rainfall capable of causing flooding to southeast Louisiana and coastal Mississippi, especially on Thursday and Friday.
- Overall, the weather service said that up to 10 inches of rain could fall in portions of southern Louisiana over the next several days.
- Storm surge of 1 to 3 feet and wind gusts from 40 to 60 mph are possible in southeastern Louisiana to coastal Mississippi, according to AccuWeather, especially if the storm organizes into a tropical storm before landfall.
- Formation chance through 48 hours – Medium (40%); through 7 days – Medium (40%).

Pending Individual Assistance Declaration Request

State	Event	Date Submitted	Approved/Denied/Pending	Number of Counties/Tribes
MI*	Severe Winter Storm	5/16/2025	Pending	11 Counties
