WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

March 20, 2024

Severe Weather Outlook

- AccuWeather meteorologists are tracking a storm located thousands of miles from the Pacific Coast of the United States that can potentially bring the next significant round of severe weather to portions of the Plains and the Mississippi, Tennessee and Ohio valleys next week.
- The storm will spread areas of low-elevation and mountain snow into the West Coast states this weekend. The storm will reorganize as it then pushes inland over the southern Rockies and then onto the southern Plains early next week. The combination of an active jet stream and an injection of warm and humid air from the Gulf of Mexico will energize the storm system and result in an eruption of showers and thunderstorms.
- The risk of severe storms will first erupt from parts of Texas and Oklahoma to the lower and middle Mississippi Valley from late Sunday to Monday and from the lower and middle Mississippi Valley to parts of the Ohio Valley and interior Southeast states from Monday to Tuesday.
- All modes of severe weather are possible, ranging from strong wind gusts and flash flooding to large hail and a few tornadoes.
- Thus far this year, the count of tornado reports is running past the historical average by nearly three dozen storms. As of Sunday, March 17, there have been 140 tornado reports versus the historical average of 175. This year's pace is well behind that of last year's 267 tornado reports.

Pending Individual Assistance Declaration Request

State	Event	Date Submitted	Approved/Denied/Pending	Number of Counties
	N/A			

*Award of task order to contractor pending
