WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

December 19, 2023

Severe Weather & Flood Activity East Coast

- A storm barreled into the Northeastern U.S. on Monday, flooding roads and downing trees, knocking out power to hundreds of thousands, forcing flight cancellations and school closures, and killing at least four people.
- More than 5 inches of rain fell in parts of New Jersey and northeastern Pennsylvania by mid-morning, and parts of several other states got more than 4 inches, according to the National Weather Service.
- Power was knocked out for hundreds of thousands of customers in an area stretching north from Virginia through New England, including nearly 423,000 in Maine and about 200,000 in Massachusetts as of Monday night, according to poweroutage.us.
- The weather service issued flood and flash-flood warnings for New York City and the surrounding area, parts of Pennsylvania, upstate New York, western Connecticut, western Massachusetts and parts of Vermont, New Hampshire and Maine.
- Five months after flooding inundated Vermont's capital city of Montpelier, water entered the basements of some downtown businesses as the city monitored the level of the Winooski River, officials said. Authorities in the village of Moretown, Vermont, urged residents to evacuate some 30 to 50 homes because of flooding.
- Several rivers are currently in major flood stage, including the Winooski River in Vermont, which rose to historic levels during the summer.
- As of Tuesday morning, the river at Essex Junction was at 21.05 feet and still rising. The National Weather Service office in Burlington said that until the river falls below 15 feet, flooding will continue to be widespread from Jonesville to the river's mouth at Lake Champlain.
- Wind gusts in parts of the region have gotten close to or above hurricane strength (74 mph). Trescott, Maine, reported a wind gust of 93 mph, just shy of winds in a Category 2 hurricane.
- The Blue Hill Observatory in Milton, Massachusetts, reported a top wind gust of 90 mph on Monday morning. That's just shy of the highest December wind gust on record, which was 95 mph on Dec. 29, 1966.
