WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

May 4, 2022

## Severe Weather Outlook

- The storm that triggered everything from tornadoes to strong winds and very large hail over the southern Plains Monday evening pivoted through the Ohio and mid-Mississippi valleys into Tuesday evening.
- On Wednesday, forecasters say the severe weather danger will shift hundreds of miles farther to the west.
- A storm that recently moved ashore from the Pacific Ocean will dip well to the south over the Rockies before turning northeastward over the Plains. It is this southward dip that will allow thunderstorms to erupt and turn severe as far to the south as the Big Bend area of the Rio Grande River.
- Showers and embedded severe thunderstorms are forecast to erupt early Wednesday in north-central Texas, Oklahoma, southern Kansas, western Arkansas and southwestern Missouri.
- These storms will carry the risk of flash flooding, frequent lightning strikes and hail. It is possible that the stabilizing influence of clouds and downpours in part of this zone may limit the risk of violent thunderstorms later in the day Wednesday and Wednesday night, including around Wichita, Kansas, and perhaps Oklahoma City.
- During Wednesday afternoon and evening, AccuWeather meteorologists will be watching for the development of discrete thunderstorms along the boundary between dry desert air to the west and moist Gulf of Mexico air to the east between U.S. Route 83 and portions of Interstate 27 and U.S. Route 385 in West Texas and the Oklahoma Panhandle.
- "In addition to damaging winds and very large hail, tornadoes may pose a significant threat in this portion of the southern High Plains late Wednesday," AccuWeather Meteorologist Andrew Johnson-Levine said.
- The tornado threat will be highest if thunderstorms can remain as separated cells, rather than if they immediately form a solid line, Johnson-Levine explained.

## Joint Preliminary Damage Assessments

State	Event	Number of Counties for IA		Start-End
		Requested	Completed	
TN	Severe Weather & Wildfires March 30-31	1	1	4/27-4/27
