WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

March 13, 2024

Severe Weather Activity

- The risk of severe weather is increasing Wednesday and Thursday for the central U.S., where storms could produce tornadoes, damaging wind gusts and large hail.
- The storms initially kicked off Tuesday just outside Kansas City, Missouri, dropping ping-pong and golf-ball-sized hail. Kansas City is again situated right in the middle of Wednesday's threat zone.
- Nearly 13 million people are situated in the two areas of concern for severe weather. The initial location will be along a warm front that extends across Missouri and Kansas. Storms are expected to develop across northeastern Kansas after 5 p.m. local time before expanding into Nebraska, Missouri and Iowa.
- For those storms that move north of the warm front, large to very large hail (greater than 2 inches) will be the primary threat. However, any storms that manage to stay along and south of the warm front will be able to tap into the warm, humid air and could produce 60-plus-mph wind gusts along with a few tornadoes.
- The severe weather threat is still a bit uncertain for areas to the south, stretching from southeastern Kansas into extreme North Texas, according to the FOX Forecast Center.

Pending Individual Assistance Declaration Request

State	Event	Date Submitted	Approved/Denied/ Pending	Number of Counties
	N/A			

*Award of task order to contractor pending
