WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

October 15, 2025

Severe Weather Outlook

Central U.S.

- A brewing cross-country storm that's expected to gather strength as it moves into the Plains and Mississippi Valley could trigger a potentially dangerous severe weather threat for millions of people across the region this weekend.
- According to the FOX Forecast Center, as the system pushes out of the West Coast and into the Rockies this week, severe weather will be possible, but that risk is relatively low.
- The system is expected to grow stronger as it heads into the Plains.
- Scattered showers and thunderstorms could form from Oklahoma up to Missouri.
- On Friday night and into Saturday, warm, humid air will surge northward into the Ark-La-Tex region, the Ozarks in Missouri and the Mississippi Valley.
- By Saturday afternoon, the atmosphere will become increasingly unstable, and wind shear could be strong enough to support the development of supercell thunderstorms. Those storms will be capable of producing large hail, damaging wind gusts and tornadoes.
- Cities in the threat zone include Fort Smith and Little Rock in Arkansas, Memphis in Tennessee and St. Louis in Missouri.

Pending Individual Assistance Declaration Request

State	Event	Date Submitted	Approved/Denied/ Pending	Number of Counties/Tribes
