WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

November 17, 2025

Severe Weather and Flooding California

- California is getting soaked by a second Pacific storm with more locally heavy rain just days after an atmospheric river triggered flash flooding, rockslides and some debris flow in the Los Angeles Basin and elsewhere.
- Parts of Southern California picked up 6 to 11 inches of rain from the atmospheric river storm late last week into last weekend.
- While this second Pacific storm does not have the atmospheric river the first storm had, it is wringing out more rain in the state right now.
- The band of soaking rain will move through California, lingering in Southern California Monday night. Scattered showers and thundershowers are possible in parts of Northern California even after the main band of rain clears.
- The heaviest additional rain in California is expected to be in the foothills of the southern Sierra and in parts of Southern California from Santa Barbara to L.A. Counties, where an additional 1 to 3 inches of rain is expected.
- Local flash flooding of roads, rockslides and minor debris flows in areas recently burned by wildfires are possible.
- The first round of rainfall from the atmospheric river-enhanced storm began last Wednesday night into early Thursday across Northern California.
- Power outages began to climb into the thousands as widespread gusts of 40-60 mph were reported with higher elevations seeing gusts over 80 mph. Trees and power lines were downed in some areas, including in far northwest California, where multiple downed trees required a closure of the Pacific Coast Highway north of Point Arena.
- Since Thursday, the Santa Barbara Airport has picked up 7.27 inches of rain, making it their wettest November on record dating to 1941. It was also their wettest four-day stretch in over 20 years, since early January 2005.
- In Ventura County Saturday, 3.18 inches fell in Oxnard, their third wettest November day in 102 years of records, there.
- Since last Wednesday night, there have been over 130 reports of flash flooding and 44 reports of landslides or debris flows in California, according to the National Weather Service.
